

Real KV-router flag sweep · 192 AgentX clients

24 GB300 GPUs · 6 × TP4/EP4 · three tested variants, with default KV and RR references

Best measured: scale 3, credit 0.8, temperature 0, FCFS. Versus default KV: +14.1% throughput, −45.7% p95 TTFT.

All five settings at 192 fail I90 ≥ 20 output tok/s/user; the best is 19.78. Passing TTFT alone is insufficient.

One run per setting. Scale 3/credit 0.8 was also measured at 96; its throughput knee remains unresolved.
