

Measured hardware · default KV, tuned KV and RR

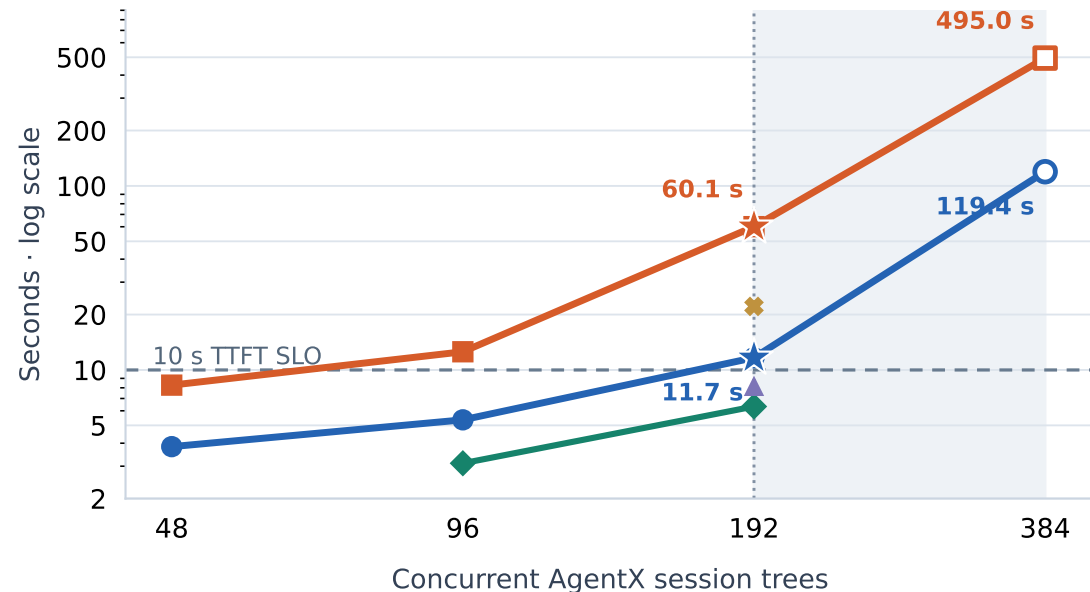

N3U · 24 GB300 GPUs · 6 × TP4/EP4 · AgentX · one-hour profiles

● KV ◆ KV scale 3 / credit 0.8 ◆ KV temperature 0.5
■ RR ▲ KV scale 2 / credit 0.8

Throughput

P95 time to first token

KV 192→384: throughput -14.5%, TTFT p95 ×10.2. RR 96→192: throughput +10.8%, TTFT p95 ×4.8.

★: sampled default-policy throughput peaks; not the SLO choices. Shading: KV saturation bracket, 192-384.

Tuned scale 3: only 96/192 measured; other variants: one point each. Their throughput knees remain unresolved.
